CURRENT INDUSTRIAL REPORTS

Women's and Children's Outerwear

DEPOS
C 3.186:627

1985

MA23F(85)-1
Issued July 1986

U.S. Department of Commerce
BUREAU OF THE CENSUS

The statistics in this publication are based on a survey of manufacturers and jobbers and represent total U.S. shipments of women's and children's outerwear. A description of the survey methodology and related information appears on page 15.

Table 1. QUANTITY OF PRODUCTION AND VALUE OF SHIPMENTS OF WOMEN'S AND CHILDREN'S OUTERWEAR: 1985 AND 1984

(Value in millions of dollars)

Product code	Product description	Unit of measure	1985		1984	
			Quantity	Value	Quantity	Value
	Women's blouses:					
23317	Women's, misses', and juniors' woven blouses and shirts	1,000 dozens.	21,216	2,089.6	21,995	2,158.5
23312	Women's, misses', and juniors' knit blouses and shirts, including sweat shirts	....do....	11,505	856.8	13,509	965.9
2335	Women's, misses', and juniors' dresses	1,000 units..	152,060	3,119.7	158,968	3,209.0
2337	Women's, misses', and juniors' suits, coats, and skirts:					
23371	Coats, excluding raincoats	....do....	10,540	564.7	12,242	687.6
23372	Suits	....do....	10,986	380.9	11,433	402.5
23374	Skirts, jackets, and vests	....do....	121,100	1,922.6	130,822	2,088.8
	Women's outerwear n.e.c.:					
23392	Washable service apparel	1,000 dozens.	2,901	262.7	3,052	269.6
23394	Swimwear	....do....	2,695	381.3	3,258	442.4
23395	Slacks	1,000 units..	242,442	2,619.4	250,502	2,771.1
23397 pt. 22533 pt.	Outerwear n.e.c.	1,000 dozens.	5,408	411.9	6,074	471.4
	Sweaters	....do....	8,791	687.9	7,925	663.4

Note: For comparison of SIC-based product codes with Schedule B export numbers and TSUSA import numbers, see table 15.

(NA) Not applicable.

[1]Source: Bureau of the Census report EM 546, U.S. Exports.

[2]Represents apparel which is cut in the United States, sent outside the country to be sewn, and then returned to the United States under 807 of Schedule 8, Special Classification Provisions of the Tariff Schedules of the United States, and is included in domestic output, imports, and exports. Because 807 garments are exported in pieces, the export quantity data may be overstated since some data may be reported in pieces rather than completed garments.

[3]Represents the value of the U.S. fabricated components.

[4]Represents the total c.i.f. (cost, insurance, and freight) value of the article which includes the value of the U.S. fabricated components and foreign processing.

[5]Source: Bureau of the Census report IM 145-X, U.S. Imports for Consumption and General Imports.

[6]This dollar value represents the c.i.f. (cost, insurance, and freight) value at the first port of entry in the United States plus U.S. import duties.

[7]Apparent consumption represents new domestic supply and is derived by subtracting exports from the sum of manufacturers' shipments plus imports.

[8]Export exludes other fibers.

[9]Import excludes wool other than knit ornamented.

[10]Excludes domestic production of women's sweat shirts which were withheld to avoid disclosing figures for individual companies.

[11]Import excludes silk not ornamented.

[12]Import excludes wool knit ornamented, knit vegetable fibers except cotton not ornamented, and silk not ornamented.

[13]Import excludes wool ornamented and wool knit ornamented under $5.00 per pound.

[14]Import excludes cotton, other knit vegetable fibers, and silk.

[15]Import excludes wool ornamented.

DESCRIPTION OF SURVEY

Scope of Survey. This survey covers manufacturers, government contractors, and jobbers of women's and children's outerwear, except very small firms (generally less than five employees) for which 1982 Census of Manufactures data were derived from administrative records of other government agencies. Garments which are cut in the United States and sent outside the country to be sewn are included in this report. These finished garments are then imported into the United States under the provisions of item 807.00 of the Tariff Schedule of the United States Annotated.

Survey Methodology. The statistics in this publication were collected by mail on Bureau of the Census annual Forms MA23F and MA23FS, Women's and Children's Outerwear. The survey panel includes all known manufacturers and jobbers of women's and children's outerwear, except the very small firms excluded from the scope of survey. Approximately 2,650 companies are included. No estimate is derived for the small firms excluded from the survey.

The information included in this report was previously published in Current Industrial Reports Series MA23A, *Apparel*. For 1980 and subsequent years, the data included in the MA23A are shown in three separate reports: MA23E, *Men's and Boys' Outerwear;* MA23F, *Women's and Children's Outerwear;* and MA23G, *Underwear and Nightwear.*

The apparel surveys were substantially revised several years ago in order to minimize the reporting requirements of small apparel cutters by reducing their reporting of detailed information by type of fabric, by type of fabric construction, and by price line. This procedure was adopted after numerous discussions with industry representatives and a review of past experiences. One of the major problems in conducting this survey in the past stemmed from the fact that the smaller manufacturers have records or can prepare reasonable estimates of total cuttings by type of garment, but records are inadequate by type of fabric. Thus, beginning with the 1966 study, those establishments reporting a shipment value of $500 thousand or less in 1965 were not requested to report detailed cutting information by price line, type of fabric, or type of construction. Beginning in 1980, establishments reporting a value of shipments of $1 million or less were sent the short form.

In order to accomplish Bureau objectives in a systematic manner, two separate questionnaires were used, Forms MA23FS (short form) and MA23F (long form). The respondents reporting on Form MA23FS were requested to submit data as applicable to their operations for approximately 52 types of women's and girls' outerwear and an associated value figure, whereas those reporting on Form MA23F were requested to submit additional data for type of fabric and type of construction as applicable to their operations. The same type report forms have been utilized since 1966.

In order to furnish the data users with detailed statistics for as many product descriptions as feasible, the output of establishments that did not report detailed data by price line, fiber content, and/or fabric construction were assigned to a "not specified by kind" (n.s.k.) code. This includes the larger companies that did not report the detail requested, the new establishments that were not required to report the detail, and the small establishments which report data on the short form.

An expanded effort is made by the Bureau of the Census to obtain detailed figures from the great majority of establishments reporting on the long Form MA23F, Women's and Misses' Outerwear. Thus, comparison of trends or change in level for prior years for items other than the published aggregate for each product should be employed with caution.

Industry Structure. The apparel industry is one of the largest and most competitive of all industries in the United States. It is composed of approximately 33 separate industry segments, within the Standard Industrial Classification System, 25 of which are involved in the manufacturing of men's, women's, and children's clothing and other apparel products while the remaining 8 are involved in the manufacturing of textile products (i.e., canvas products, textile bags, etc.).

The apparel industry is characterized by three types of establishment operations—manufacturers, jobbers, and contractors. The functions of those classified as manufacturers involved purchasing materials, cutting and sewing the product within the manufacturers' establishment, and selling the finished product. The functions of a jobber, like those of a manufacturer, involve buying raw materials and marketing the finished product. However, unlike a manufacturer, a jobber has the final actual processing of the product done on contract in an outside factory. Finally, the function of a contractor is to make products in his establishment according to clearly defined specifications from materials owned by others. A contractor, unlike a manufacturer or jobber, does not become involved in the actual sale of the finished goods.

Reliability of Data. Survey error may result from several sources: (1) inability to obtain information about all cases in the survey; (2) response errors; (3) definitional difficulties; (4) differences in the interpretation of questions; (5) mistakes in recording or coding the data obtained; and (6) other errors of collection, response, coverage, and estimation for missing data. These nonsampling errors also occur in complete censuses. Although no direct measurement of the biases due to nonsampling errors has been obtained, precautionary steps were taken in all phases of the collection, processing, and tabulation of the data in an effort to minimize their influence.

A major source of bias in the published estimates is due to imputing data for nonrespondents, for late reporters, and for data which fail logic edits. Missing figures are imputed based on yearly movements shown by reporting firms. Imputation generally is limited to a maximum of 10 percent for any one data cell. Figures with imputation rates greater than 10 percent are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to nonresponse because the actual yearly movements for nonrespondents may or may not closely agree with the imputed movements. The range of difference between the actual and imputed figures is not precisely

known but is assumed to be small. The degree of uncertainty regarding the accuracy of the published data, however, increases as the percentage of imputation increases. Figures with imputation rates above 15 percent should be used with caution.

Revisions to Previous Period Data. Statistics for previous years may be revised as the result of corrected data from respondents, including the receipt of late reports for which imputations were made as described above. Figures which have been revised by more than 5 percent from previously published figures are indicated by footnotes.

Revisions include changes to prior period data resulting from reconciliation of the results of this survey with the 1984 Annual Survey of Manufactures to correct differences in reported data between the two series and to identify and verify new establishments included in the scope of this survey. Table 13 presents a comparison of data from the two series by census product class following the reconciliation.

EXPLANATION OF TERMS

Production. Includes all specified types of garments cut or knit within the 50 States of the United States from material owned by the reporting company or by others on its account. In addition, garments which are cut in the United States, sent outside the country to be sewn, and shipped back to the United States under the 807 import category are included.

Value of Shipments. Value of all shipments for specified types of garments from establishments in the 50 States of the United States whether done by the reporting company or others on its account. The value of shipments is closely related to the value of production but is not necessarily equal to the production for a product during the year.

Women's, Misses', and Juniors' Garments

Suits. Includes tailored suits and uniforms but excludes pantsuits, jumpsuits, and coordinate suit sets that can be purchased as separate pieces, i.e., shirt, vest, blouse, pants, etc. Excludes nurses', maids', and medical uniforms which are included in washable service apparel.

Pantsuits. Includes jumpsuits and pantsuits sold as a unit. Excludes coordinates which are sold as separates.

Dresses. Includes suit type dresses, formal, work, house, etc.

Coats and Capes. Includes toppers, car coats, suburban coats, plastic coats, reversible coats, and wool water-repellant coats, but excludes raincoats.

Jeans and Dungarees. Includes all pants of jean-type construction which are made from denim fabric.

Slacks, Including Jean-cut Casuals. Includes all pants other than denim jeans, i.e., tailored pants, pants with an elastic waistband, etc.

Girls, Children's, and Infants' Outerwear

Girls', Subteen and Teenage, Garments. These include sizes 7 to 16.

Children's Garments. These incluide sizes 2 to 6X.

Infants' and Toddlers' Garments. These include sizes up to 4T.

COMPARISON OF EXPORT, IMPORT, AND DOMESTIC OUTPUT DATA

The Standard Industrial Classification (SIC) system used for domestic output and the statistical export and import commodity classifications were developed independently. This results in considerable difficulty in comparing the three types of data for many commodity areas. The domestic output classification is based on type of industry; on the other hand, the export and import classification system is more materials oriented. Also, there are a substantial number of imported commodities which have no comparable domestic output classification. The relationships shown in this report should be considered only as approximations, since, in addition to the problems mentioned above, there are also the following problems affecting the comparability of the three sets of data.

Valuation. There are different methods of valuation for the three types of data:

- Domestic Output – Valued at the point of production. It includes the net sales price, f.o.b. plant, after discounts and allowances, exclusive of freight charges and excise taxes.

- Exports – Valued at the point of exportation. It includes the selling price, or cost if not sold, and inland freight, insurance and other charges to the export point.

  Estimated producers' values of exports have also been developed. These values more closely approximate the values reported for domestic output because they exclude freight, insurance, and other charges applied from the producing plant to the export point.

- Imports – Valued at the first port of entry in the United States. It includes c.i.f. (cost, insurance, and freight), duty, and other charges to the import point.

Duplication in Quantity and Value of Output. Because producers' shipments of some commodities may be used as materials for incorporation into other commodities, combinations of data for such commodities may contain a certain amount of duplication. Thus, percentages of exports to output or imports to apparent consumption (output plus imports minus exports) at four-digit or broader levels may be understated. Where duplication is known to be substantial, the output data are appropriately noted in the table.

Low-Value Import and Export Transactions. Detailed commodity information is not included for individual export shipments valued

at not more than $1,000. Generally, detailed commodity information is not included for individual import shipments valued at not more than $1,000. For textiles and textile products, gloves, footwear, and miscellaneous rubber and plastics products, detailed commodity information is not included for individual import shipments valued at not more than $250. This is believed to have only negligible effects on the statistics for the bulk of the commodities.

Manufacturers' Shipments, Not Specified by Kind. The value of manufacturers' shipments at the four-digit industry level often includes a small amount which is not distributed among the individual five-digit product classes. Export and import percentages at the more detailed levels might, therefore, be slightly overstated.

Time Lag Between Output and Exports. There will be a lag between the time a commodity is produced or shipped by the producer and the time it is actually exported, especially when intermediaries (wholesalers, exporters, etc.) are involved. Ordinarily, this type of discrepancy is insignificant in annual figures.

"Direct" vs "Total" Commodity Exports and Imports. Export and import data do not include materials which are incorporated into other more finished products and exported or imported in finished form. Thus, by showing only direct exports and imports, the relation of exports to output and imports to apparent consumption for intermediate products is considerably understated.

Used Commodities. With a few exceptions, used or rebuilt commodities are classified in the same import or export codes as is new merchandise. Percentages are thus overstated to the extent that used or rebuilt products are significant in trade.

Geographic Area of Coverage. Import and export data reflect the movement of merchandise into and out of U.S. foreign trade zones, the U.S. Virgin Islands, and the U.S. customs territory (includes the 50 States, the District of Columbia, and Puerto Rico).

HISTORICAL NOTES

Data on women's and children's outerwear have been collected by the Bureau of the Census since 1955. Historical data may be obtained from Current Industrial Reports (called Facts for Industry before 1959) available at your local Federal Depository Library. A list of these libraries may be obtained from the Bureau of the Census regional offices:

ACKNOWLEDGMENTS

This report was prepared in the Industry Division, Bureau of the Census, under the direction of Carole A. Ambler, Chief, Current Nondurables Branch, and Judy Dodds, Chief, Textile and Apparel Section. Valerie Strang was directly responsible for preparation of the report. Gaylord Worden, Chief of the Division, and Thomas L. Mesenbourg, Assistant Chief for Current Industrial Reports, provided overall direction and coordination to this project.

The Census Bureau releases 1,000's of statistical reports each year.
